

Full-stack developer and Business Administration student dedicated to building minimalist, user-first applications. Combining technical expertise in mobile, web, and hardware with emerging insights into product strategy and business operations.

Work Experience

Software Engineer Part-Time	Orbital Studio Athens, Greece	Oct 2025-Present orbitalstudio.gr
- Restored system stability by identifying and resolving critical bugs within a legacy EJS and Node.js codebase, restoring full functionality for 20+ beauty businesses and their customers. - Spearheading the incremental migration of the Vyne ecosystem (Marketplace, Admin Panel, and Cockpit) from EJS to React.js to improve front-end scalability and overall performance. - Implemented real-time synchronization using Server-Sent Events (SSE) and WebSockets, ensuring instant appointment updates and live data reflects across the store management panels and consumer marketplace. - Collaborated on a multi-product ecosystem that serves beauty industry professionals, providing tools for online booking, review management, and internal administrative "Cockpit" oversight.		
Founder & Solo Lead Developer Full-Time	Evox Communications Athens, Greece	Jul 2021-Present evoxs.xyz , evox.uno
- Architected Epsilon Nexus, a centralized mobile hub and social network that unifies the Evox ecosystem, featuring SecureLine, a messaging protocol for encrypted peer-to-peer communication. - Scaled a school yearbook platform (Jeanne d'Arc) from concept to a live deployment for 80+ active users, handling the full product lifecycle, deployment, and user feedback loops. - Developed a high-resiliency transit application (OASA) that leverages telematics APIs with advanced caching strategies, maintaining 100% uptime for users even during official API outages and providing full offline functionality. - Designed and implemented unique real-time notification systems for transit tracking, including "2-minute arrival" and "departure from timetable" alerts, features currently unavailable in competing market applications. - Engineered Cryptox®, a proprietary security layer utilizing AES-256 (Key & IV) encryption and IndexedDB for local-first data processing, ensuring end-to-end data privacy across the entire application suite. - Orchestrated a 13+ project ecosystem over 5 years, demonstrating the ability to manage complex software lifecycles and pivot technologies to meet community needs.		

Education

BSc in Business Administration, University of West Attica	2025 – 2029 (Expected)
High school diploma, Ecole Jeanne d'Arc, Piraeus, Grade 18.1/20	2025
